

Title

5 Treatment of Thrombosis by Combined Use of a
Factor Xa Inhibitor and Aspirin, Tissue Plasminogen
Activator (TPA), a GPIIb/IIIa Antagonist, Low Molecular
Weight Heparin or Heparin

10 Abstract of the Disclosure

Provided is a method of treating thrombosis in mammals by administering therapeutically effective amounts of a combination of (i) a Factor Xa inhibitor, 15 and (ii) a compound selected from the group consisting of aspirin, TPA, a GPIIb/IIIa antagonist, low molecular weight heparin and heparin, wherein the dose administered for at least one of (i) and (ii) is a subtherapeutic dose. Preferably, the combination of 20 (i) and (ii) provides a synergistic effect.
